## DETAILED ACTION

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

**Claims 1, 2, 5, 7-14, 20-27, and 30-35 are rejected under 35 U.S.C. 103(a) as being unpatentable over Barath, Vigil, et al., Kaplan, et al., and/or Klein, and in further view of Baskin, Claiman, and Chu et al.**

In response to the decision on the "Petition to Withdraw from Abandonment", the examiner has carefully reviewed the subject matter of the pending claims and considers the Baskin, Claiman, and Chu et al., patents to be relevant prior art, and therefore, respectfully invites applicant to provide comments as to the differences between his invention and the teachings of these references.

In figures 2 and 3, the Baskin patent discloses all the structural limitations disclosed in the independent claims. Importantly, figure 3 shows a cross sectional view of the balloon and flexible elongate element (36). Please note that upon inflation of the balloon, flexible elongate element (36) would inherently engage a lesion and because of the exposed width of the elongate element, a longitudinal channel would be formed. The same argument can be also used with respect to the Claiman, and Chu et al., references.

Art Unit: 3763

Based on the teachings of Baskin, Claiman, and Chu et al., for a person of ordinary skill in the art, modifying Barath, Vigil, et al., Kaplan, et al., and/or Klein with the discussed modifications would have been considered obvious in view of the conventionality of these enhancements.

### ***Conclusion***

In view of the invitation by the examiner to further discuss the merits of Baskin, Claiman, and Chu et al., this action is not a final office action. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Manuel Mendez whose telephone number is 703-272-4977. The examiner can normally be reached on 0730-1800 hrs.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mr. Nicholas D. Lucchesi can be reached on 571-272-4977. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
